

ECOSIA'S INCUBATOR FOR

regenerative agroforestry

The “search engine that plants trees” invests individual amounts of 10-100k€ into agricultural projects in Europe, which

- *integrate trees* into agriculture, in order to *rebuild soil and healthy ecosystems*
- showcase *scalable, diverse, resilient and productive agriculture* with *>1000 trees or on >10ha land*
- *demonstrate the economical viability* of agroforestry systems and can repay the invested capital to the incubator.

We accept project proposals until **31.12.2020**. For evaluation by our international expert panel we require a convincing land- and cash flow plan. Details and the application form can be found at:
