

## Pollinator Garden Workshop

Saturday, May 16, 2015 8:30 AM to 11 AM

Learn how to design and plant a garden that will help to support our important pollinators. After an overview of garden design and installation, you will get hands-on experience planting a pollinator garden at the JC Raulston Arboretum. Learn how to recognize some of our many native bees, understand their unique relationships with plants, and support them with attractive, bee-friendly gardens. This workshop is appropriate for novice gardeners, but there will be something new for everyone—including plants to take home! Session taught in Spanish from 10:30 am – 1:30 pm

This workshop will be taught by Elsa Youngsteadt, Margarita López-Uribe, April Hamblin, Anne Spafford, and Bernadette Clark, Department of Entomology and Department of Horticultural Science, NC State University.

Advance registration is required. Please go to the event website for more information and how to register online using our registration e-store. <http://jcra.ncsu.edu/pollinators/>

Session taught in Spanish from 10:30 am– 1:30 pm
